

We all need air to stay alive, but the air we breathe today is often polluted. Burning petrol in cars, or coal in power stations and factories, can cause gases to be released which pollutes the air.

LICHEN POLLUTION TEST

Plants called Lichens are sensitive to air pollution.

You can use them to see how clean the air is. Look for Lichens on walls, stones and trees.

Use the guide below to test the quality of the air around you.

Make a list of activities that people do at school, at home and outside that can cause air pollution. Can you think of a way people can reduce these activities
