

Each household creates about 1 tonne of rubbish every year. Most of it is thrown away properly and eventually dumped in specially made land-fill sites. Unfortunately too much is still dumped by people in the wrong places causing litter.

Have a look around the school after a playtime. Find out how much and what kind of litter has been left lying around.

Type of litter	How much?
Paper	
Plastic	
Metal	
Cardboard	
Food	

Bin it, don't sling it!

Some rubbish can be recycled

Find out where the litter bins are in your school and look at where most of the litter is found. Could you suggest a better position for these bins
